Professional Summary

Backend-focused Java Developer with hands-on experience building secure and scalable REST APIs using Spring Boot, Spring Security, and MySQL. Skilled in designing layered architectures, implementing authentication and authorization (JWT, RBAC), validation, and optimizing database queries. Experienced in mentoring while developing production-style backend systems. Seeking entry-level backend/software engineering roles.

Technical Skills

Backend: Java 8+, Spring Boot, Spring Security, Spring Data JPA, Hibernate

Database: MySQL (Joins, Indexing, Query Optimization)

Core CS: Data Structures, OOP, Multithreading, Exception Handling

Tools: Git, GitHub, Postman

Concepts:

- REST API Design, MVC Architecture, DTO, Pagination, Validation
- JWT Authentication, Role-Based Access Control (RBAC), API Security

AI & Productivity:

- Prompt Engineering (Effective use of ChatGPT for development and problem-solving)
- AI-assisted Content Creation (technical documentation, training material)
- Code Generation & Debugging using AI tools
- Basic understanding of Generative AI concepts

Experience

Backend Developer (Training & Mentorship)

Sep 2025 – Jan 2026

Anudip Foundation (Direct Employment)

- Delivered backend development training while actively building and debugging REST APIs
- Mentored 800+ students in Java, Spring Boot, and backend system design
- Implemented and guided layered architecture (Controller–Service–Repository)
- Diagnosed and resolved API failures, database issues, and performance bottlenecks
- Conducted code reviews focusing on clean code, scalability, and DSA optimization

Backend Developer (Training & Mentorship) (Third-Party Payroll)

Nov 2024 – Aug 2025

CertED Technologies (for Anudip Foundation)

- Delivered backend training and contributed to REST API development projects
- Guided students in building scalable backend applications using Spring Boot and JPA
- Assisted in debugging real-world backend issues and improving API performance
- Conducted code reviews and enforced best practices in backend development

Projects

Secure Finance Dashboard API (Spring Boot, JWT, MySQL)

[View on GitHub](#)

- Built secure REST APIs using Spring Boot and Spring Security
- Implemented JWT authentication and role-based access control (ADMIN, ANALYST, VIEWER)
- Developed APIs for managing financial records with user-specific data isolation
- Designed dashboard APIs to calculate income, expense, and balance
- Integrated MySQL with JPA/Hibernate for data persistence
- Tested and validated APIs using Postman, handling edge cases like token expiry
- Secured endpoints using JWT filter and handled token validation and expiration

REST API with Pagination Validation (Spring Boot, JPA, MySQL)

[View on GitHub](#)

- Designed and developed RESTful APIs using Spring Boot and Spring Data JPA
- Implemented DTO pattern, validation, and global exception handling
- Built pagination and sorting for efficient handling of large datasets
- Wrote custom JPQL queries for optimized data retrieval

- Followed REST standards using proper HTTP status codes and ResponseEntity

Student Management System (Spring Boot, Hibernate, MySQL)

[View on GitHub](#)

- Developed backend system supporting CRUD operations with structured architecture
- Applied layered design and JPA integration for separation of concerns
- Implemented validation and exception handling
- Tested APIs using Postman

Data Structures & Algorithms

- Solved 200+ problems covering Arrays, Strings, Stack, Queue, Graph, Recursion
- Focused on time complexity optimization and edge case handling

Education

Bachelor of Engineering (Computer Engineering)

2024

Savitribai Phule Pune University, Pune

Additional Information

- Deployed projects using platforms like Hostinger and Netlify
- Maintained well-documented GitHub repositories with README, screenshots, and structure
